Screening Questionnaire for Person to be Vaccinated	Yes	No
Are you sick today (i.e. fever greater than 39.5℃, nasal congestion, breathing problems, active infection)?		
Have you ever had a serious reaction after receiving a vaccination in the past?		
Do you have an allergy to any of the components of the influenza vaccine? *(e.g. gentamicin, kanamycin, neomycin, thimerosal, formaldehyde)*		
Do you have any allergies? (including: medications, food, or latex)?		
Do you take blood thinner (aspirin, warfarin, dabigatran, rivaroxaban, apixaban, edoxaban, etc) or have bleeding problems?		
Have you developed Guillain-Barré syndrome within 6 weeks of previous influenza vaccination?		
If the Patient is less than 9 years old, are they receiving the influenza vaccine for the first time?		
Optional Screening Questions: Your answers to these questions help the Pharmacist determine your current immunization status and assist in providing adult vaccine recommendations. This information is NOT required to administer an influenza vaccine.	Yes	No
If you are 50 years or older, have you received a Shingles vaccine in the past?		
If you are 50 years or older, have you received a Pneumococcal vaccine in the past?		
Have you received all recommended doses of a complete COVID-19 vaccine series?		

Seasonal Influenza Vaccination Patient/Agent Consent

I consent to having the Health Care Professional (HCP) administer the seasonal influenza vaccine. I have reviewed the document entitled "Preparing for Your Influenza Vaccine" and the pharmacist has answered my questions. I understand the risks, benefits, expected outcome and possible side effects of this vaccine and agree to wait in the Pharmacy at minimum 15 minutes after receiving the vaccination. I agree to see a doctor if I develop any side effects or health problems after receiving the vaccine. I agree that the Pharmacy may share my personal health information regarding this vaccination as required with public health officials and other healthcare providers.

INFLUENZA VACCINE AFTER CARE

By getting your influenza vaccine today, you've done your part to protect yourself, your loved ones and your community from the spread of influenza. Please take a moment to review the following information

What should I do if I experience a reaction?

The influenza vaccine is well tolerated and most people will have no reaction or only a mild reaction, so you should be able to go about your normal activities for the rest of the day. The following are potential side effects and suggestions to help manage them:

- Soreness at the injection site – Apply a cool com press to the site (10 minutes on and 10 minutes off) until the soreness goes away.
- Mild fever and muscle aches – If needed, ask your Pharmacist to recommend an over-the-counter medication

Why do I need to stay at the Pharmacy for 15 minutes after getting my influenza vaccination?

In very rare instances, a serious allergic reaction can occur. These reactions most often begin shortly after receiving the vaccination but may appear a few hours later as well. Symptoms may include any of the following and require immediate medical attention:

- Face, mouth, throat swelling
- Hives, itchy rash
- Chest pain, increased heart rate, difficulty breathing
- Sudden decrease in blood pressure, dizziness, confusion
- Crampy abdominal pain, nausea, vomiting, diarrhea

In addition, if any unusual condition occurs following vaccination, such as a high fever (over 38°C), severe muscle aches or tingling or numbness in the legs, seek medical attention right away.

How long does it take for the influenza vaccine to become effective?

It takes about 2 weeks after your influenza vaccination for your body to build antibodies, and therefore, you may not have added protection from the influenza during this time.

For more information, speak to your Pharmacist.
